All submissions for this problem are available.

A Little Elephant and his friends from the Zoo of Lviv like candies very much.

There are **N** elephants in the Zoo. The elephant with number **K** ($1 \le K \le N$) will be happy if he receives at least A_K candies. There are **C** candies in all in the Zoo.

The Zoo staff is interested in knowing whether it is possible to make all the **N** elephants happy by giving each elephant at least as many candies as he wants, that is, the **K**th elephant should receive at least A_K candies. Each candy can be given to only one elephant. Print **Yes** if it is possible and **No** otherwise.

Input

The first line of the input file contains an integer **T**, the number of test cases. **T** test cases follow. Each test case consists of exactly 2 lines. The first line of each test case contains two space separated integers **N** and **C**, the total number of elephants and the total number of candies in the Zoo respectively. The second line contains **N** space separated integers A_1, A_2, ..., A_N.

Output

For each test case output exactly one line containing the string **Yes** if it possible to make all elephants happy and the string **No** otherwise. Output is case sensitive. So **do not print YES or yes**.

Constraints

$1 \le T \le 1000$

$1 \le N \le 100$

$1 \le C \le 10^9$

$1 \le A_K \le 10000$, for **K** = 1, 2, ..., N

Example

```
Input:
2
2 3
1 1
3 7
4 2 2

Output:
Yes
No
```

Explanation

Case 1. We can give one candy to the first elephant and two candies to the second elephant and make them both happy. Hence the answer is **Yes**. Alternatively we can give one candy to each elephant and left one candy for ourselves but they again will be happy.

Case 2. Even if we give four candies to the first elephant and two candies to the second elephant we will have only one candy left and can not make last elephant happy since he needs two candies for his happiness. Hence the answer is **No**.

CodeChef (/) - A Platform for Aspiring Programmers
CodeChef was created as a platform to help programmers make it big in the world of **algorithms**, **computer programming**, and **programming contests**. At CodeChef we work hard to revive the geek in you by hosting a **programming contest** at the start of the month and two smaller programming challenges at the middle and end of the month. We also aim to have training sessions and discussions related to **algorithms**, **binary search**, technicalities like **array size** and the likes. Apart from providing a platform for **programming competitions**, CodeChef also has various algorithm tutorials and forum discussions to help those who are new to the world of **computer programming**.

Practice Section (/problems/easy) - A Place to hone your 'Computer Programming Skills'
Try your hand at one of our many practice problems and submit your solution in the language of your choice. Our **programming contest** judge accepts solutions in over 55+ programming languages. Preparing for coding contests were never this much fun! Receive points, and move up through the CodeChef ranks. Use our practice section to better prepare yourself for the multiple **programming challenges** that take place through-out the month on CodeChef.

Compete (/problems/easy) - Monthly Programming Contests, Cook-off and Lunchtime
Here is where you can show off your **computer programming skills**. Take part in our 10 days long monthly coding contest and the shorter format Cook-off and Lunchtime **coding contests**. Put yourself up for recognition and win great prizes. Our **programming contests** have prizes worth up to INR 20,000 (for Indian Community), $700 (for Global Community) and lots more CodeChef goodies up for grabs.
